

# Data Capability and Maturity Assessment

KALYPSO

Evaluate and Advance Your Data Management Journey

Do we know how to measure our data governance efforts and build a roadmap for improvement?

What architectural transformation initiatives do we have planned to advance our data management capabilities?

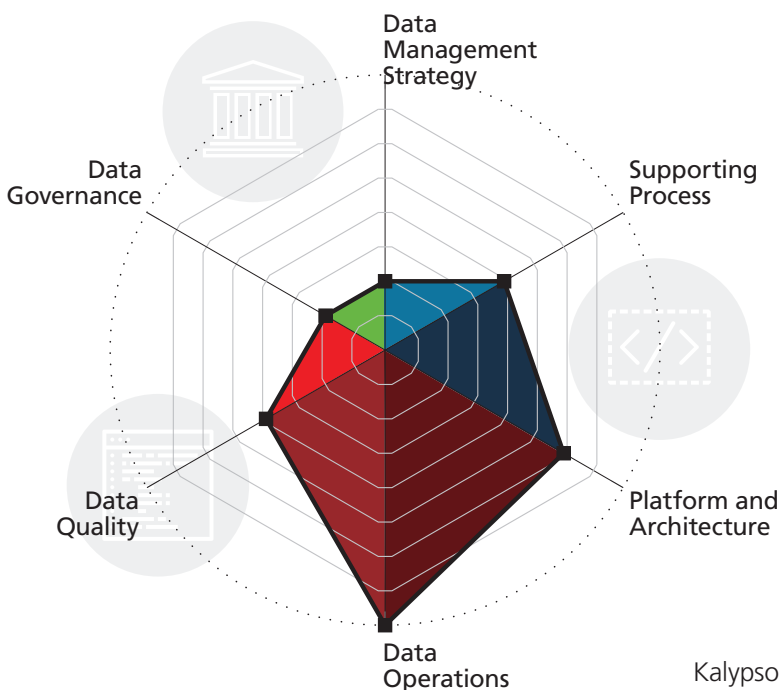

As a responsible data citizen, how can I get my organization to commit to an effective data management program?

## Organizations are often challenged with understanding their current data governance capabilities today

– and the roadmap for where they need to be tomorrow to better manage their data assets.

The Data Capability and Maturity Assessment involves your stakeholders, subject matter experts and leadership to:

- Evaluate organizational maturity of data management capabilities
- Benchmark against industry-leading practices
- Align data management strategy with business objectives
- Develop capability-building roadmap to operationalize strategy

## Deliverables include:

- ✓ **Comprehensive organizational maturity assessment** of data management capabilities
- ✓ **Scorecard and presentation** to executive management on gaps between current and desired state of data management capabilities
- ✓ **Data management or data governance roadmap**
- ✓ **Benchmark of key data management process areas** to understand maturity versus industry leaders
- ✓ **Recommendations on measurable, consistent data governance milestones** across the organization

Take the first step in effective management of your data assets.
