

## Enable Collaborative, On-Time Documentation Delivery

Companies that develop highly engineered products are challenged with managing a staggering volume of product-related information while balancing complex document publishing requirements, increased regulatory compliance and heightened customer expectations.

Despite the growing demands, many organizations rely on manual processes with information stored in disparate locations and/or systems. This can lead to numerous iterations and approval cycles, and inaccurate documentation, directly impacting:

- Time-to-market documentation delivery
- Profitability
- Engineering productivity
- Customer satisfaction
- Aftermarket sales and service opportunities

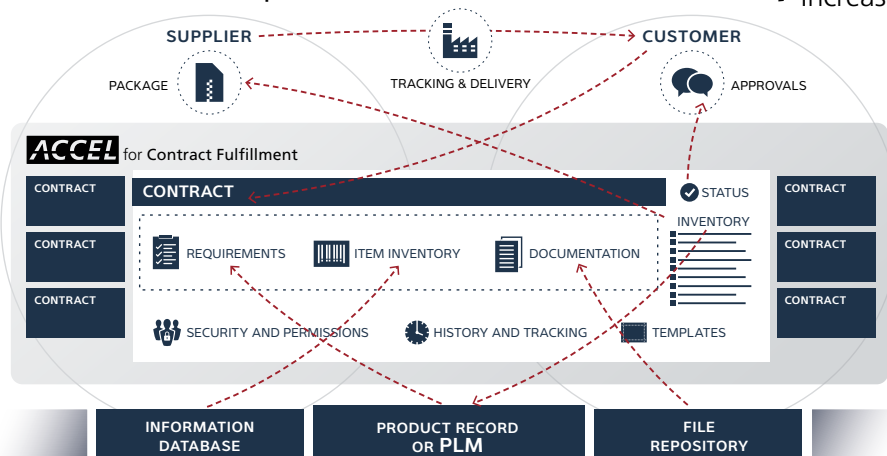

Companies can reduce the time, effort and resources to support the order or contract fulfillment process and improve documentation delivery performance with **Accel for Contract Fulfillment**.

Accel for Contract Fulfillment serves as a single point of entry for all of the business functions involved with supporting the order or contract fulfillment process, providing an integrated platform around a fully automated workflow that connects documentation requirements to the product lifecycle.

### Benefits

- Improved on-time performance and lead time accuracy
- Reduced order-to-cash cycle times by 40%
- Decreased transmittal and governance hours by 50%
- Reduced order planning hours by 75%
- Increased system and process management productivity through automation
- Improved data integrity
- Enhanced supplier and customer collaboration
- Enabled traceability of customer requirements and product deliverables
- Increased win-rate and customer satisfaction

### Role-based User Experience Portal

Accelerate ROI  
with Accel for Contract Fulfillment. >

## Accelerated, leading-practice user experience (UX) model for faster ROI

Pre-configured for rapid implementation

Designed to quickly deploy foundational capabilities and realize the benefits

Based on industry-leading practices and implementations in innovation and product development

Built on PTC Windchill PLM platform + PTC ThingWorx internet of things (IoT) platform

### Benefits:

- Reduced implementation cost and risk
- Faster time to deploy with “production-ready” software system, pre-defined security model, and reusable attributes and workflows
- Minimized configuration effort
- Improved user adoption via out-of-the-box capabilities and prepared training materials
- Faster realization of business objectives, benefits and ROI

### Foundational Capabilities

#### Integration & Task Management

- A single, multi-faceted UX model
- Integration with order management systems such as ERP to automatically import and export contract deliverables, structure and product document requirements
- Multiple access-related portal for engineering, procurement suppliers, etc.
- Reusable object templates to automatically populate attributes with product data

#### Collaboration

- Teams dynamically assigned in real time to projects/tasks
- Standard document template library to drive consistency and reusability across locations
- Workflows to route work tasks automatically to the right roles at the right time
- Packaging mechanisms to simplify and accelerate auditable information exchange with both suppliers and customers

#### Real-Time Reporting

- Real-time dashboards to allow complete visibility into document status, deliverable status per supplier and resource workload to plan
- View of complete document and revision history and enhanced document tracking
