Kalypso Data Loader Tool
for Oracle Agile PLM for Process

KALYPSO

Ensure your data is onboard with your PLM implementation

During a Product Lifecycle Management (PLM) implementation, data migration is a big challenge. Errors and incomplete data are common, and the process is extremely inefficient.

There are four common reasons that must be addressed.

1. The data that will be migrated to PLM rarely resides in one place. In most cases, it is spread across disparate sources such as emails, PDF, Word and Excel files.

2. Data must be quickly loaded into the PLM system for use in training, go-live and post-go live activities. But the volume of data is often too large to be loaded manually in a short period of time.

3. As an organization's innovation strategy changes, data needs to be updated, cleansed and added to align to this strategy even after go-live.

4. Events such as acquisitions, divestures, supplier replacements, and material attribute modifications require data to be modified or loaded in large volumes post PLM go-live. Performing these activities manually is inefficient and error prone.

While Oracle Agile PLM for Process provides many extension points and APIs to enable customization, there is no Oracle tool for loading data into the system. Recognizing this, Kalypso offers Oracle Agile PLM for Process customers a data loader platform that enables mass loading and updating of PLM data. This helps organizations establish a clean and complete data set for training and go-live of the PLM system. Robust data reinforces PLM as the single source of truth and builds end-user alignment, trust and adoption of the PLM platform.

What is the Kalypso Data Loader for Oracle Agile PLM for Process?

The Kalypso Data Loader expedites the import of the following data types into Oracle Agile PLM for Process:

- Material Specifications
- Packaging Specifications
- Trade Specifications
- Nutrient Profiles
- Formula Specifications
- Company Data
- Facility Data
- Supplier Information
- Spec-related Sourcing Approvals
- Administrative Data such as Extended Attribute Definitions and Custom Section
- Administrative Data such as Users, Business Units, Taxonomy

The Kalypso Data Loader is incorporated into the data migration work stream of the project. The tool and data loader sheets are specifically tailored to the PLM for Process environment, which makes populating and reusing data intuitive and easy. Data is validated to ensure error-free specifications are loaded.

Benefits of the Kalypso PLM for Process Data Loader

The Kalypso Data Loader for Oracle Agile PLM for Process can help your company:

- Reduce the need for additional staff to perform data loading during the initial implementation

- Reduce the time and risk of manual data loading

- Increase the accuracy of imported data with data validation, error logging, and debug tracing, minimizing time spent correcting data errors during production data load

- Consolidate specification data in a single location within the data loader sheets, improving visibility and enhancing the data cleansing and management prior to loading it into PLM for Process

- Load specification data in multiple languages

- Apply mass updates to previously loaded data

- Extract specifications from PLM for Process into MS Excel to perform data audits

- Get started quickly with an easy-to-learn tool requiring little PLM for Process or data loading experience, allowing resources to focus on higher value tasks

Minimum System Requirements

- Oracle Agile PLM for Process v6.1.x and higher

- Windows Server 2008 and greater

- Microsoft Excel 2007 and 2010

- 2GB RAM, 10GB Hard Drive

Don't Let Data Be a Roadblock

The Kalypso Data Loader efficiently collects, prepares, and loads large complex data sets into Oracle Agile PLM for Process, helping companies realize the benefits of PLM faster than ever before.

If you are interested in learning more about the Kalypso Data Loader for Oracle Agile PLM for Process, contact **Prashant Jagarlapudi** by email prashant.jagarlapudi@kalypso.com, phone at **+1.817.404.9879.**
